

## Review Reflection

From working with your team, interacting with visitors, and studying other projects, consider the following points. Be ready to discuss them at the review's end or Friday.

1. Prioritize design criteria for the project: how can we define a good solution?

Social

Ecological

Site

Building

Economic

2. Interpret valuable review comments as drawings OR diagram your response. Translating ideas into a graphic format may help you think about them.

3. Can you identify things learned from the session?

4. Which products communicated the design most effectively? What was missing from the presentations?

5. What activities have been most / least valuable in working on the project?

6. What happened in working in your team? What lessons can you draw?

7. What is confusing or unclear?

8. How could we make the class work better for you?
